

Global VMS rollout project

| Boehringer Ingelheim | *Germany*

Boehringer Ingelheim is a global biopharmaceutical company with 180 sites around the world. To effectively support video surveillance needs in those various locations, Boehringer elected to standardize its hardware and software approach in the configuration and rollout of IT systems. Thanks to the ease of

deployment, its high scalability and the advanced customization options of Qognify VMS, Boehringer has significantly reduced the deployment time for new CCTV installations, decreasing overall project costs, time and effort.

These IT launches also include physical security applications — in particular, video management. Because Boehringer’s sites are numerous and widely spread out, it was a challenge to implement a video management system (VMS) that could support end users by meeting their requirements while simultaneously satisfying the IT needs of stability and ease of support.

The solution

To find the right VMS — one that would meet all its current and future requirements — Boehringer conducted an in-depth vendor selection process, pitting the market leaders in VMS against each other. They were compared via answers to more than 200 questions relating to IT security, system expandability, reliability of operation and ease of deployment, followed by physical testing conducted by end users and a technical team.

As a result of this thorough process, Qognify VMS solutions were selected as ideal for Boehringer’s multisite enterprise environments. With a focus on easy installation, configuration and management and support for the majority of network cameras available on the market, Qognify VMS is capable of managing all of Boehringer’s camera feeds. This allows Boehringer to exploit holistic video monitoring at a glance — whether on-site or remotely.

The benefits

Thanks to the simple setup, high scalability and customizable architecture of Qognify VMS, Boehringer can create new CCTV installations significantly faster, reducing the total cost, time and effort of deployment projects. In addition, because Qognify VMS can be personalized to suit each customer’s and location’s particular needs, Boehringer was able to build the system to meet its exact specifications.

The customer

Boehringer is working on breakthrough therapies to improve the lives of humans and animals. As a leading research-driven biopharmaceutical company, the company creates value through innovation in areas of high unmet medical need. Founded in 1885 and family owned ever since, Boehringer has a long-term perspective. Around 52,000 employees serve more than 130 markets in its three business areas: human pharmaceuticals, animal health and biopharmaceutical contract manufacturing.

Hexagon is the global leader in digital reality solutions, combining sensor, software and autonomous technologies. We are putting data to work to boost efficiency, productivity, quality and safety across industrial, manufacturing, infrastructure, public sector, and mobility applications. Our technologies are shaping production and people-related ecosystems to become increasingly connected and autonomous — ensuring a scalable, sustainable future.

Hexagon’s Safety, Infrastructure & Geospatial division improves the resilience and sustainability of the world’s critical services and infrastructure. Our solutions turn complex data about people, places and assets into meaningful information and capabilities for better, faster decision-making in public safety, utilities, defense, transportation and government.
